

- 7 is a happy number.
- 7 is a hexagon number.
- 7 is a Lucas number.
- 7 is a twin prime number.
- 7 is the number of days in a week.

And such great sanctity is there in the number seven that it has a preeminent rank beyond all others in the first decade. For the other numbers, some produce without being produced, others are produced but have no productive powers themselves; others again both produce and are produced. But the number seven alone is contemplated in no part... philosophers liken this number to victory, which has no mother... and the Pythagoreans compare it to the ruler of all things...

Philo Judaeus

HOW CAN A FARMER PLACE 27 PIGS IN 4 PIG PENS SO THAT THERE IS AN ODD NUMBER OF PIGS IN EACH PEN?
