

1 About Science PresentationEXPRESS Conceptual Physics X

Science is the study of nature's rules.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics X

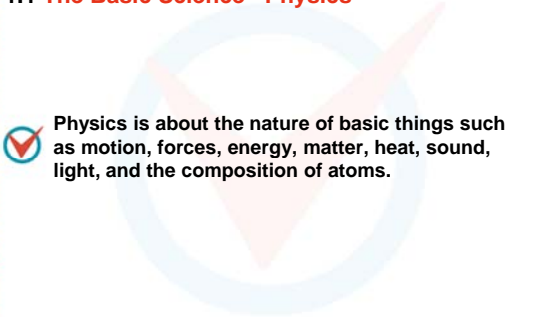

We can't control Earth's motion, but we have learned the rules by which it moves. The study of nature's rules is what this book is about. Understanding these rules adds richness to the way we see our world.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics X

1.1 The Basic Science—Physics

 Physics is about the nature of basic things such as motion, forces, energy, matter, heat, sound, light, and the composition of atoms.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics X

1.1 The Basic Science—Physics

The study of science branches into the study of living things and nonliving things.

- The life sciences include biology, zoology, and botany.
- The physical sciences include geology, astronomy, chemistry, and physics.

Most new discoveries occur where science fields overlap—in biochemistry and biophysics, for example. Study more than one field of science!

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics X

1.1 The Basic Science—Physics

You can understand other sciences much better if you first understand physics.

- Physics is the most basic of all the sciences.
- Chemistry is about how matter is put together.
- Biology is still more complex and involves matter that is alive.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics X

1.1 The Basic Science—Physics

CONCEPT CHECK What is physics about?

PEARSON

1 About Science Presentation EXPRESS Conceptual Physics x

1.2 Mathematics—The Language of Science

When scientific findings in nature are expressed mathematically, they are easier to verify or to disprove by experiment.

1 About Science Presentation EXPRESS Conceptual Physics x

1.2 Mathematics—The Language of Science

When the ideas of science are expressed in mathematical terms, they are unambiguous.
 The equations of science provide compact expressions of relationships between concepts.
 The methods of mathematics and experimentation have led to enormous successes in science.

Physics equations are guides to thinking!

1 About Science Presentation EXPRESS Conceptual Physics x

1.2 Mathematics—The Language of Science

CONCEPT CHECK: Why is mathematics the language of science?

1 About Science Presentation EXPRESS Conceptual Physics x

1.3 Scientific Methods

Scientific methods generally include some, if not all, of the following:

1. Recognize a problem.
2. Make an educated guess—a hypothesis—about the answer.
3. Predict the consequences of the hypothesis.
4. Perform experiments to test predictions.
5. Formulate the simplest general rule that organizes the main ingredients: hypothesis, prediction, and experimental outcome.

1 About Science Presentation EXPRESS Conceptual Physics x

1.3 Scientific Methods

Scientific methods are extremely effective in gaining, organizing, and applying new knowledge.
 The scientific method is often credited to the Italian physicist Galileo Galilei (a.) and the English philosopher Francis Bacon (b.).

1 About Science Presentation EXPRESS Conceptual Physics x

1.3 Scientific Methods

Although the scientific method is popular, it is not the universal key to discoveries and advances in science.

- Trial and error, experimentation without guessing, and accidental discovery account for much of the progress in science.
- The success of science has more to do with an attitude of inquiry, experimentation, and humility than with a particular method.

1 About Science PresentationEXPRESS Conceptual Physics x

1.3 Scientific Methods

CONCEPT CHECK: What are the steps of a scientific method?

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.4 The Scientific Attitude

 If a scientist finds evidence that contradicts a hypothesis, law, or principle, then the hypothesis, law, or principle must be changed or abandoned.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.4 The Scientific Attitude

In science, a **fact** is a close agreement by competent observers who make a series of observations of the same phenomenon.

A scientific **hypothesis** is an educated guess that is not fully accepted until demonstrated by experiment.

When hypotheses about the relationship among natural quantities are tested over and over again and not contradicted, they may become **laws** or **principles**.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.4 The Scientific Attitude

Scientists must accept their findings even when they would like them to be different. They must distinguish between what they see and what they wish to see.

Physics is a way of finding knowledge, how things get to be known, what is not known, and to what extent things are known (for in science, nothing is known absolutely).

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.4 The Scientific Attitude

Scientific Theories

A scientific **theory** is a synthesis of a large body of information that encompasses well-tested and verified hypotheses about certain aspects of the natural world.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.4 The Scientific Attitude

The theories of science evolve as they go through stages of redefinition and refinement.

- The refinement of theories is a strength of science, not a weakness.
- More important than defending beliefs is improving upon them.
- Better hypotheses are made by those who are honest in the face of experimental evidence.

FACTS ARE REVISABLE DATA ABOUT THE WORLD

THEORIES INTERPRET FACTS

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.4 The Scientific Attitude

CONCEPT CHECK: When must a hypothesis, law, or principle be changed or abandoned?

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.5 Scientific Hypotheses

 To determine whether a hypothesis is scientific or not, look to see if there is a test for proving it wrong.

PEARSON

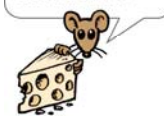

1 About Science PresentationEXPRESS Conceptual Physics x

1.5 Scientific Hypotheses

A scientific hypothesis must be testable.

- It is more important that there be a way of proving it *wrong* than that there be a way of proving it correct.
- If there is no test for its possible wrongness, then it is not scientific.

Experiment is the test of truth in science.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.5 Scientific Hypotheses

Here is a hypothesis that is scientific:

“No material object can travel faster than light.”

Even if it were supported by a thousand other experiments, this hypothesis could be proven wrong by a single experiment. (So far, we find it to be true.)

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.5 Scientific Hypotheses

Here are hypotheses that are not scientific:

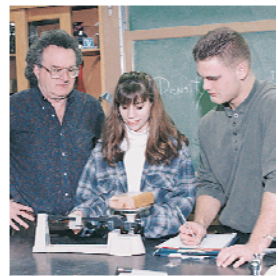

- The hypothesis: “The alignment of planets in the sky determines the best time for making decisions” cannot be proven wrong, nor can it be proven right. It is *speculation*.
- The hypothesis: “Intelligent life exists on other planets somewhere in the universe” can be proven correct, but there is no way to prove it wrong if no life is ever found.
- The hypothesis: “Most people stop for red lights” doesn’t link up to our general understanding of nature, so it doesn’t fit into the structure of science.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.5 Scientific Hypotheses

Experiments are conducted to test scientific hypotheses.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.5 Scientific Hypotheses

think!

Which of these is a scientific hypothesis?

- Atoms are the smallest particles of matter.
- The universe is surrounded by a second universe, the existence of which cannot be detected by scientists.
- Albert Einstein was the greatest physicist of the 1900s.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.5 Scientific Hypotheses

think!

Which of these is a scientific hypothesis?

- Atoms are the smallest particles of matter.
- The universe is surrounded by a second universe, the existence of which cannot be detected by scientists.
- Albert Einstein was the greatest physicist of the 1900s.

Answer:

- is scientific, because there is a test for its wrongness.
- has no test for possible wrongness and is therefore unscientific.
- is an assertion that has no test for possible wrongness.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.5 Scientific Hypotheses

CONCEPT CHECK: How do you know if a hypothesis is scientific?

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.6 Science, Technology, and Society

 Science is a method of answering theoretical questions; technology is a method of solving practical problems.

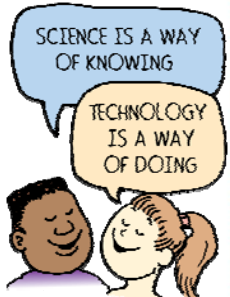

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.6 Science, Technology, and Society

Science has to do with discovering facts and relationships between observable phenomena in nature and with establishing theories that organize and make sense of these facts and relationships.

Technology has to do with tools, techniques, and procedures for putting the findings of science to use.

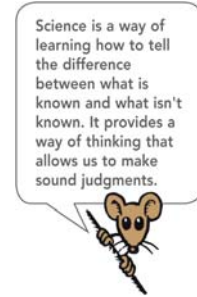

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.6 Science, Technology, and Society

Science and technology make up a larger part of our everyday lives than ever before.

The scientific way of thinking becomes vital to society as new facts are discovered and new ideas for caring for the planet are needed.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.6 Science, Technology, and Society

CONCEPT CHECK: What is the difference between science and technology?

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.7 Science, Art, and Religion

Science is mostly concerned with discovering and recording natural phenomena, the arts are concerned with the value of human interactions as they pertain to the senses, and religion is concerned with the source, purpose, and meaning of everything.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.7 Science, Art, and Religion

The domains of science, art, and religion are different, even though they overlap.

- The domain of science is natural order.
- The domain of religion is nature's purpose.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.7 Science, Art, and Religion

The principal values of science and the arts are comparable.

- Literature describes the human experience. The arts do not necessarily give us experiences, but they describe them to us and suggest what may be in store for us.
- Science tells us what is possible in nature. Scientific knowledge helps us to predict possibilities in nature even before these possibilities have been experienced.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.7 Science, Art, and Religion

think!

Which of the following involves great amounts of human passion, talent, and intelligence?

- art
- literature
- music
- science

PEARSON

1.7 Science, Art, and Religion

CONCEPT CHECK How are science, art, and religion different?

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.8 In Perspective

 Progress in our age is much quicker than it was thousands of years ago.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.8 In Perspective

The pyramids testify to human genius, endurance, and thirst for deeper understanding.

A few centuries ago, cathedrals, synagogues, temples, and mosques were manifestations of people's vision.

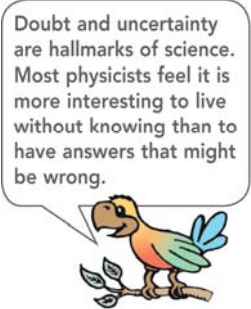

This enormous focus of human energy was inspired by a vision that went beyond world concerns—a vision of the cosmos.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.8 In Perspective

Today the efforts of many of our most skilled scientists, engineers, and artisans are directed toward building the spaceships that orbit Earth. Many people working on today's spaceships were alive before the first jetliner carried passengers. Where will younger lives lead in a comparable time?

 Doubt and uncertainty are hallmarks of science. Most physicists feel it is more interesting to live without knowing than to have answers that might be wrong.

PEARSON

1 About Science PresentationEXPRESS Conceptual Physics x

1.8 In Perspective

Astronauts may one day travel in this spaceship of the future.

PEARSON
